

Data Centers & Life Science

Global supply chains have experienced many different forms of disruption over the years—from earthquakes and floods to rolling power blackouts. Now, the global COVID-19 pandemic is requiring many organizations to reset crisis management and business continuity plans as employees shift practices to work safely through the pandemic.

Our global Data Centers & Life Science team is closely monitoring industry trends. Our experts are among the most experienced in the industry, with unmatched insight into the operational, mechanical, financial and regulatory considerations that impact data centers and life science facilities.

We serve our clients globally—not only as valuers but also as advisors—offering consultative, innovative solutions to help our clients make informed and timely decisions. Based on our considerable depth of experience and extensive breadth of relationships in the field, our team has its “finger on the pulse” of the most current developments and trends impacting this highly specialized asset class.

We have been involved in large portfolio valuations spanning multiple countries across five continents and have consulted on investments in all types of mission critical

facilities, including powered shells, turnkeys, interconnect gateways, co-location facilities, carrier hotels, and life science properties. These services were performed for private equity funds, institutional lenders, large pension funds, sovereign wealth funds, global infrastructure funds, hyperscale companies and global IT conglomerates.

Our Data Centers & Life Science specialty practice group is one of the world’s premier valuation groups, focused exclusively on data centers, life science, and related facilities.

Our Data Centers & Life Science service offerings include:
